APC# 1-MS-2014

### SURVEYORS REPORT

In accordance with Title 865 of the Indiana Administrative Code (IAC 1-12-1 thru 29) the following observations and opinions are submitted regarding the various uncertainties in the locations of the lines and corners established on this survey as a result of the following:

- Availability and Conditions of Reference Monuments
  - Occupation or Possession Lines
  - Clarity or Ambiguity of the Record Descriptions used and/or Adjoiners Descriptions
  - The Relative Positional Accuracy of the Measurements
- A. The subject tract was originally surveyed by Bill Nicholson and monuments were recovered as shown hereon. All of the monuments recovered were located very close to their calculated position  $\pm 0.2'$  and were accepted. I held the record calls and the monuments recovered mark the respective corners. The SE corner of the NW/4, NW/4 is the only section corner identified however the record description does not call out a monument at this location and none was found. The exact location of said section corner was reestablished using the record call of 121.52 feet however this position places a deflection in the south line thereof. The original called for monuments were held and no monument was set for said section corner.
- Possession lines are in agreement with the lines established per this survey.
  - None apparent. The found survey monuments are in agreement with the record description of both the surveyed tract and the adjoining tracts.
  - The survey shown on the hereon plat is classified as a rural survey as defined by 865 IAC 1-12-7, Section 7d, Subsection 3 on the Indiana Administrative Code. The relative positional accuracy for this survey exceeds the minimum standard requirement for a rural survey of 0.26 feet plus 200 parts per million.
